

# I am an Environmental Biotechnologist....

I am **Ayisha Affo Souleymane**, a PhD Research Student at Cranfield University.

The aim of my PhD project is to develop an understanding of how phosphorus dynamics - between the water, sediment and vegetated compartments of surface flow wetlands - can be manipulated to enable prediction of treatment performance and determine the compatibility of phosphorus removal with key co-benefits.

*Ayisha has a Master's Degree for work on nitrogen removal using woodchips as an external carbon source.*

*I am environmental biotechnologist because...  
'I am leveraging the biological processes in constructed wetlands to treat wastewater.'*
