UKRI Digital Research Skills Catalyst Workshop on

Introduction to Quarto

22 April 2026

→ [Register here!](#) ←

Join us for this online two-hour workshop to learn how to weave together narrative text and code to produce beautiful, production-ready outputs. We welcome researchers and research support staff in academia or industry or others that regularly produce reports with data analysis.

What you will learn

- **The Workflow:** How to set up a Quarto project in RStudio
- **Formatting:** Text styling, headers, and citations
- **Code Integration:** Embedding R code chunks and controlling their output
- **Dynamic Statistics:** Insert dynamic statistics (e.g., means or p-values) directly into sentences, ensuring numbers update automatically
- **Exporting:** Rendering your work to HTML, PDF, and Word formats

By the end of the workshop, you will be able to transform raw data into a professional, polished report (HTML, Word, or PDF) where the text and analysis remain in sync.

Is this for you? Ideal for researchers, data analysts, programme managers and anyone looking to streamline their reporting workflow. Some familiarity with the layout of RStudio and beginner level knowledge of R is assumed. Cost: £75/£50.
